### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The invention as claimed in each of applicant's independent claims 7-11 when considered as a whole, the exact arrangement of parts and/or the inter connections and functions is not taught nor fairly suggested by prior art made of record in case.

The prior art of record does not teach or fairly suggest the claim features to summarize, that in addition to having the common X driver and Y driver supplying a signal to the pixel area there is a separate liquid crystal drive voltage supplying circuit connected to a switch in the pixel area for controlling the connection of a voltage line to a pixel, based on the output of the signal comparator, and specifically features directed towards the manner in which the drive voltage lines are connected together for example when  $N = 4$  and  $I = 3$ ; then rows 1 to 4, 9 to 12 and 17 to 20 are connected together by the same voltage drive line and rows 5 to 8, 13 to 16 and 21 to 24 are connected to one another by a different voltage drive in combination with all the other limitations of the claim as illustrated in figure 12 items 30, 40, 60 and voltage drive lines 61-63.

The closest prior art of record Bouron et al. (4,859,997) shows more than two drivers but in contrast each driver supplies a separate line to each pixel and each driver is for only even rows or odd rows there is no driving of four consecutive rows by the same drive voltage line and then driving the next four consecutive rows with a different drive voltage line.
